The Honorable Frank Pallone Ranking Member U.S. House Energy and Commerce Cmte 2107 Rayburn House Office Building Washington, DC 20515

Dear Chairman Guthrie and Ranking Member Pallone:

On behalf of the American Academy of Audiology (AAA) — the largest organization of, by, and for audiologists — I would like express our strong opposition to any efforts to eliminate or reduce funding for the Centers for Disease Control and Prevention's (CDC) Early Hearing Detection and Intervention (EHDI) Program.

Since its establishment by Congress in 1999, the EHDI program has played a critical role in ensuring that newborns and infants are screened for hearing loss early in life and receive timely intervention services. Hearing loss is one of the most common birth conditions, and without early detection and support, it can severely hinder a child's development — particularly in language, communication, and social skills.

Before EHDI programs, the average age of identification of a child with hearing loss was over 3 years of age. Since EHDI was implemented, the average age of identification is 3 months of age. Early access to language/communication is critical to meeting later development milestones and ultimately future earning potential of the child. EHDI has successfully built and supported a national infrastructure that allows for consistent, statewide newborn hearing screening and follow-up care.

Eliminating this program would endanger the progress we have made as a country. It would disproportionately affect underserved communities, reduce access to critical services, and ultimately lead to higher long-term educational and social costs.

As President of the AAA, I ask you to protect this critical program and allow for the distribution of previously Congressionally-allocated funds through 2027. Continued investment in early hearing detection is not just sound public health policy, it is a moral and economic imperative.

The American Academy of Audiology is dedicated to providing quality hearing and balance-care services through professional development, education, research, and increased public awareness of hearing and balance disorders. Should you have any questions or wish to discuss these concerns further, please feel free to reach out to Joanne Zurcher, MPP, VP of Government Relations & Policy at jzurcher@audiology.org. Thank you for your time and thoughtful consideration.

Sincerely,

Patricia Gaffney, AuD, MPH

Farrier Suffrey The MPH

President of the American Academy of Audiology
